

UNDERGROUND FUEL STORAGE TANKS PROJECT PROFILE

Hector International Airport | Fargo, ND

16,000 Gallon Plasteel® Elutron® Fuel Storage Tank

TrueNorth Steel solution and products used in application:

TrueNorth Steel provided 1 - 16,000 gallon tanks using Plasteel Elutron's double walled steel / fiberglass jacketed fuel storage system. This tank was compartmentalized and sized for the customers' holding needs.

Installation took place at the Hector International Airport in Fargo, ND. The airport had outgrown their current maintenance facility location and structure. Construction started to expand their equipment fleet as well as their building and facilities.

The new tank will allow for adequate storage for the new equipment pumping station. TrueNorth Steel Logistics provided on time delivery and a solution when the install time was pushed back. 10 deadman anchoring systems and the tank were installed in under 60 minutes.
