JACKSON HOLE AIRPORT FIREGUARD TANKS

LOCATION	SIZE	COMPLETION DATE	SCOPE
Jackson Hole, WY	69,000 lbs Overall Weight, 51' Long and 10' in Diameter	July 2023	Fireguard® Tanks Stairs Catwalk Systems

The Jackson Hole, WY Airport needed storage for Jet A fuel. TrueNorth Steel came through with a Steel Solution: 3 x 30,000 gallon tanks with 3" thick Fireguard® insulation. After traveling over 900 miles, these tanks were unloaded and staged next to an active runway. The three tanks were added alongside six existing fuel tanks on the site. Additionally, TrueNorth Steel supplied stairs and a catwalk system to provide easy access.

TrueNorth Steel representatives demonstrated commitment to the project's success throughout all phases--from design to fabrication to shipping and installation--communicating with all project partners until the solution was set in place.
