# TruePlate™ Structural Plate

Many drainage and bridge applications exceed the size and design limitations of standard corrugated metal pipe. In these cases, structural plate can provide a solution by offering larger sizes, heavier gages and specialized shapes to meet almost any application requirement.

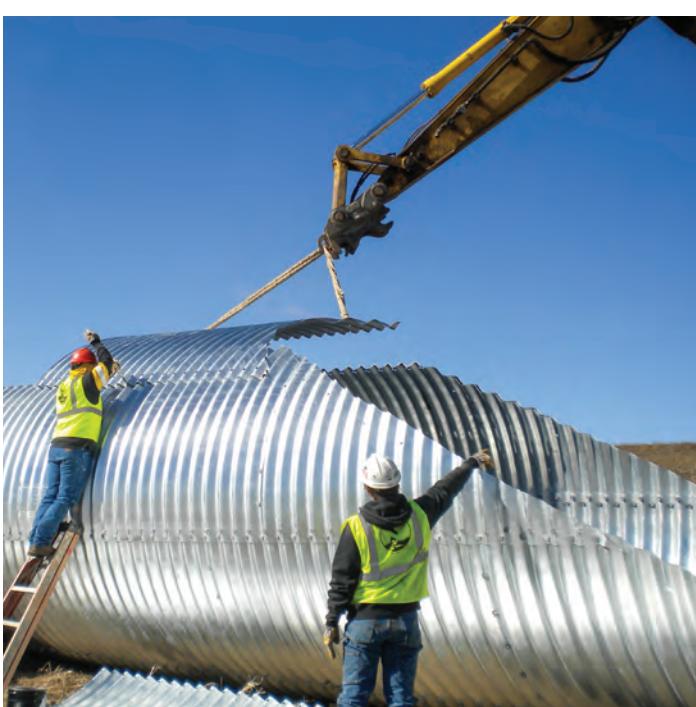

TrueNorth Steel® offers expert design support to engineers, owners and contractors and provides customized solutions for your drainage culvert or bridge application including:

- Large drainage or underpass structures up to 50' diameter
- Bottomless arches up to 83' span
- Box Culverts – low rise/wide span up to 35' clear span
- Bottomless structures for stream or wetlands crossings
- High fill heights and high live load applications

## Advantages Of TruePlate™ Structural Plate Include:

- Design versatility
- Low installed cost relative to cast-in-place or precast concrete and small bridges
- Easily installed in difficult or remote site situations
- Designed to meet your life-cycle requirements
- Less maintenance
- No bridge expansion joints for a smooth driving surface

# Engineering Support

The TrueNorth Steel® engineering team can support engineers, owners, and contractors using TruePlate™ galvanized steel or aluminum alloy. You can rely on our experience and resources in all aspects of the design of structural plate including: material selection; structural and hydraulic design; footing designs; detailing and installation. Additionally, we can provide fully engineered solutions stamped by professional engineers.

## Contact us for:

- Specifications
- Drawings
- End treatment details
- Assembly assistance
- Installation guidance

### **The following are typical steps in the design of structural plate culverts, storm drains, underpasses, and bridges:**

- Clearance analysis for pedestrian and vehicular passage
- Hydraulic sizing
- Structural design and resulting material properties
- Foundation design
- Environmental design and resulting material or coating selection
- Structure end treatment design
- Specifications: Material and Installation

## TruePlate™ Steel and Aluminum Structural Plate

Shape	Steel 6" x 2" Corrugation	Aluminum 9" x 2.5" Corrugation	Steel 15" x 5.5" Corrugation	Applications
<b>ROUND</b>	<b>Diameter</b>	<b>Diameter</b>	<b>Diameter</b>	
	5' to 26'	6' to 21'	27' 6" to 51' 3"	Culvert, railroad, vehicular or pedestrian underpass, caisson, vertical shaft, culverts, subdrains, sewers, service tunnels, etc. All plate same radius, for medium and high fills (or trenches).
<b>PIPE ARCH</b>	<b>Span x Rise</b>	<b>Span x Rise</b>		
	6' 1" x 4' 7" to 20' 7" x 13' 2"	6' 7" x 5' 8" to 21' 11" x 14' 11"		Low rise culvert provides greater flow area at low elevations where headroom is limited. Has hydraulic advantages at low flows. Corner plate radius 31".
<b>ARCH - Single Radius</b>	<b>Span x Rise</b>	<b>Span x Rise</b>	<b>Span x Rise</b>	
	6' x 1' 10" to 26' x 13' 11"	6' x 1' 10" to 23' x 11' 11"	22' 11" x 11' 5" to 82' x 42'	Low rise culvert, bottomless arch, fish passage, vehicular or pedestrian underpass, corrugated footings, cast-in-place or precast concrete footings.
				Aesthetically pleasing low clearance and large waterway openings.
<b>ARCH - Multiple Radius</b>	<b>Span x Rise</b>		<b>Span x Rise</b>	
	18' 5" x 8' 4" to 50' 7" x 19' 11"		10' 5" x 3' 10" to 51' 8" x 13' 11"	Low rise - long span structures. Culverts, bridges and underpasses. Constructed on cast-in-place concrete footings or slabs.
<b>BOX CULVERT</b>	<b>Span x Rise</b>	<b>Span x Rise</b>		
	9' 8" x 2' 7" to 25' 5" x 10' 2"	8' 9" x 2' 6" to 35' 3" x 13' 7"		Low rise culvert, short span bridge, corrugated footings, cast-in-place or pre-cast concrete footings, full corrugated invert.
				Low-wide waterway enclosures, culverts, storms sewers.
<b>UNDERPASS</b>	<b>Span x Rise</b>	<b>Span x Rise</b>		
	5' 8" x 5' 9" to 20' 4" x 17' 9"	6' 1" x 5' 9" to 20' 5" x 17' 9"		Vehicular or pedestrian underpass.
				For pedestrians, livestock or vehicles.
<b>ELLIPSE - Horizontal</b>	<b>Span x Rise</b>	<b>Span x Rise</b>		
	7' 4" x 5' 6" to 14' 11" x 11' 2"	9' 2" x 6' 8" to 14' 11" x 11' 2"		Low rise culvert, vehicular or pedestrian underpass, grade separations.
<b>ELLIPSE - Vertical</b>	<b>Span x Rise</b>	<b>Span x Rise</b>		
	4' 8" x 5' 2" to 25' 0" x 27' 8"	5' 7" x 6' 3" to 20' x 22' 3"		Vehicular or Pedestrian Underpass, Culverts, sewers, service tunnels, recovery tunnels. Plates of varying radii: shop fabrication.
				For appearance and where backfill compaction is only moderate.

### Structural Plate Meets The Following Specifications

#### MATERIALS

ASTM A761	Corrugated Steel Structural Plate, Zinc Coated for Field Bolted Pipe, Pipe Arches and Arches
ASTM 964	Corrugated Steel Box Culverts
ASTM B746	Corrugated Aluminum Alloy Structural Plate for Field Bolted Pipe, Pipe Arches and Arches
ASTM B864	Corrugated Aluminum Alloy Box Culverts
AASHTO M167	Corrugated Steel Structural Plate, Zinc Coated for Field Bolted Pipe, Pipe Arches and Arches
AASHTO M219	Corrugated Aluminum Alloy Structural Plate for Field Bolted Pipe, Pipe Arches and Arches

#### INSTALLATION

ASTM A807	Practice for Installing Corrugated Steel Structural Plate Pipe for Sewers
ASTM B789	Practice for Installing Corrugated Aluminum Structural Plate Pipe for Culverts and Sewers
AASHTO	LRFD Bridge Construction Specifications, Section 26, Metal Culverts

#### DESIGN

ASTM A796	Practice for Structural Design of Corrugated Steel Pipe, Pipe Arches and Arches
ASTM B790	Practice for Structural Design of Corrugated Aluminum Pipe, Pipe Arches and Arches
AASHTO	LRFD Bridge Design Specifications, Section 12, Buried Structures and Tunnels
AREMA	Manual for Railway Engineering, Section 4 Culverts

## Sizes, Shapes and Height of Cover Tables

The design tables for Steel Structural Plate Pipe and Pipe Arch contained in this document are excerpted from the National Corrugated Steel Pipe Association's Corrugated Steel Pipe Design Manual. The design tables for Aluminum Structural Plate are excerpted from the original Aluminum Association Aluminum Products Drainage Manual which is no longer in publication. For more complete design information or design support for Structural Plate, please contact your TrueNorth Steel® representative.

The tables contained in this document are meant as a general reference and TrueNorth Steel® always recommends that each application should be analyzed specifically. Minimum allowable cover amounts are a function of the listed live loads whether HS-20, HS-25 or HL-93. Construction loads applied may be greater than HS-20, HS-25, HL-93 and E-80 and may require greater temporary cover.

All structural plate designs should include a thorough foundation analysis. Arch Structural

Plate and Aluminum Box Culverts require additional foundation design attention because they are often constructed on either corrugated metal footing pads, upon concrete footings or slabs. TrueNorth Steel® is available to assist with the design of any of these options.

The successful installation of any corrugated structure is highly dependent upon the backfill material and backfilling process. The National Corrugated Steel Pipe Association publishes specific backfill selection and backfill process guidance within the Corrugated Steel Pipe Design Manual. ASTM A807 also provides comprehensive installation guidance for steel structural plate and ASTM B789 provides the same guidance for aluminum structural plate.

Finally, an appropriate end treatment such as beveled ends, concrete slope collars, headwalls or scour cut-off toe walls will ensure long term stability of the structure. TrueNorth Steel® has extensive experience with this feature and all of the design requirements of structural plate.

15-10	9-10	0.111	24		9
16-5	9-11	0.111	30		9
16-7	10-1	0.111	30		9

Notes:

1. Soil bearing capacity refers to the soil in the region of the pipe corners. See Chapter 10 for design of pipe envelope at pipe corners. The remaining backfill around the pipe arch must be compacted to a specified AASHTO T-99 density of 90%.

2. Use reasonable care in handling and installation.

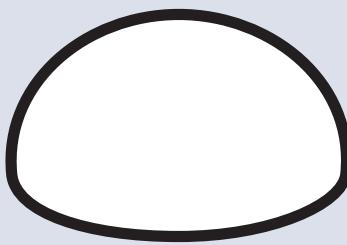

3. Pipe arches are typically used where the cover does not exceed 15 feet.

\* Minimum covers are for H20 and H25 loads. See Table 7.8 for construction load requirements. Minimum covers are measured from top of pipe to bottom of flexible pavement or top of pipe to top of rigid pavement. Minimum cover must be maintained in unpaved traffic areas.

16-5	9-11	0.140	42			7
16-7	10-1	0.140	42			7

Notes:

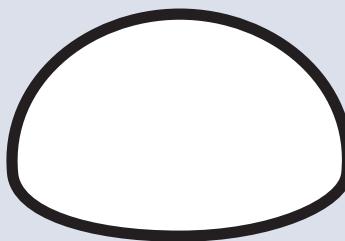

1. Soil bearing capacity refers to the soil in the region of the pipe corners. See Chapter 10 for design of pipe envelope at pipe corners. The remaining backfill around the pipe arch must be compacted to a specified AASHO T-99 density of 90%.
2. Use reasonable care in handling and installation.
3. Pipe arches are typically used where the cover does not exceed 15 feet.

\* From top of pipe to bottom of tie.

## Deep Corrugated Structural Plate

Deep corrugated Steel Structural Plate presents owners, engineers and contractors with a material exhibiting deep corrugations resulting in a very strong and stiff section. This section lends itself well to large diameter and longer span structures.

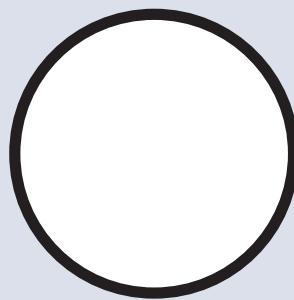

The following pages describe common structure sizes and shapes that may be constructed using deep corrugated Steel Structural Plate. Due to the complexity and critical nature of these large structures, TrueNorth Steel® recommends a case-by-case analysis of each structure under consideration. Contact your TrueNorth Steel® representative for assistance.

## Round Structural Plate - Deep Corrugation - Steel

15" x 5-1/2" Corrugation

Excerpted from National Corrugated Steel Pipe Association

# Aluminum Structural Plate Design and Height of Cover Tables

Aluminum Structural Plate presents a highly durable material and provides extended design life in corrosive conditions. Utilized extensively since the 1960's, this product has a proven history of successful usage in critical highway installations.

Aluminum Structural Plate is designed using ASTM B 746 and the corresponding AASHTO Standard Specifications for Highway Bridges Sec. 12. The information on the following pages follow adheres to these design standards. Each proposed construction site should be carefully analyzed and checked to ensure that live and dead load conditions correspond to those used in these height-of-cover tables. TrueNorth Steel® is available to assist with your analysis.

Because Aluminum Structural Plate exhibits distinctly different material properties than steel, many of the designs require the use of rib stiffeners in combination with the 9" x 2.5"

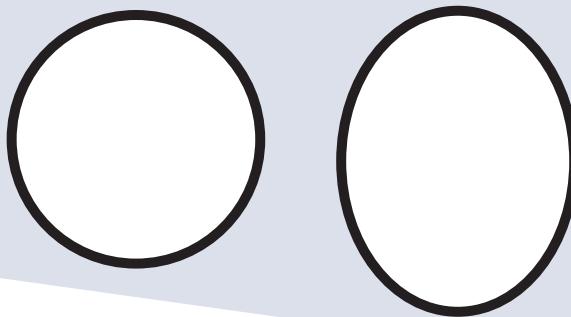

corrugated section to provide additional bending resistance. The following tables show when rib stiffeners are required, what type of rib stiffeners are required and rib stiffener spacing. Together, the rib stiffener and the corrugated section create a very strong composite section.

Aluminum Box Culverts are very low profile structures designed to address specific ranges of live and dead load conditions, thus there are a relatively large number of design configurations described in the height of cover tables found in the following pages. It is important that the live load conditions be well defined and that the minimum and maximum cover be adhered to closely.

TrueNorth Steel® is well versed in the design, specification and construction of aluminum structural plate structures. Contact your local representative for support and cost estimates.

## Round, Vertical Ellipse Structural Plate - Aluminum

Notes for Aluminum Structural Plate HOC Tables:

1. Table based on AASHTO Sec. 12 Standard Specifications for Highway Bridges.
2. H-20, HS-20 Live Load (Contact your local TrueNorth Steel® representative for H-25, HS-25 and HL-93 Loading).
3. Minimum cover is defined as the vertical distance from the top of the corrugated structure to the bottom of flexible or top of rigid pavement.
4. Minimum cover for heavy off-road construction equipment loads must be checked.
5. Greater cover heights possible with heavier gage and rib combinations.
6. Dimensions are to inside corrugation crests and are subject to manufacturing tolerances.
7. Areas shown are for round pipe. Areas for vertical ellipses are slightly less

- Notes for Aluminum Structural Plate HOC Tables:
1. Tables based upon AASHTO Sec. 12 Standard Specifications for Highway Bridges.
  2. H-20, HS-20 Live Loads. (Contact TrueNorth Steel® for HL-93.)
  3. Minimum cover is defined as the vertical distance from the top of the corrugated structure to the bottom of flexible or top of rigid pavement.
  4. Minimum cover for off highway construction loads must be checked.
  5. Minimum cover heights < span/8 determined by moment capacity analysis.
  6. Greater cover heights possible with other plate thickness/rib combinations.
  7. Arch footing reaction are available upon request.
  8. TrueNorth Steel® can supply footing dimensions and design upon request.

20-5	17-9	294.4						

Note:

1. Maximum cover based on allowable corner bearing pressure of approximately 4,000 psf (2tsf).

# Aluminum Structural Plate Box Culvert

## Applications

Aluminum box culverts provide an excellent option for low-rise, wide-span box culvert or short span bridge requirements. These structures provide a wide, single opening with no obstructions to catch debris. They can be constructed on a full corrugated invert for erosion protection, corrugated footing pads or concrete footings. In many cases they can be fully assembled off site and lifted by a light crane or trackhoe and set in place. Consult with your TrueNorth Steel® representative when utilizing either the full invert option or corrugated footing pads. Sufficient bearing capacity is required for these options.

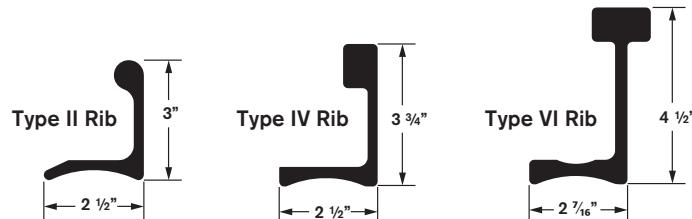

## End Treatments

Aluminum box culverts may be constructed using a prefabricated corrugated aluminum headwall and wingwalls, cast-in-place concrete headwalls, segmental concrete block headwalls or the structure ends may be left projecting from the roadway embankment. TrueNorth Steel® advises that all culvert ends be sufficiently protected to preclude erosive and scouring forces that can damage the structure and the roadway embankment. Your TrueNorth Steel® representative is experienced with all of these end treatments and can provide details and guidance.

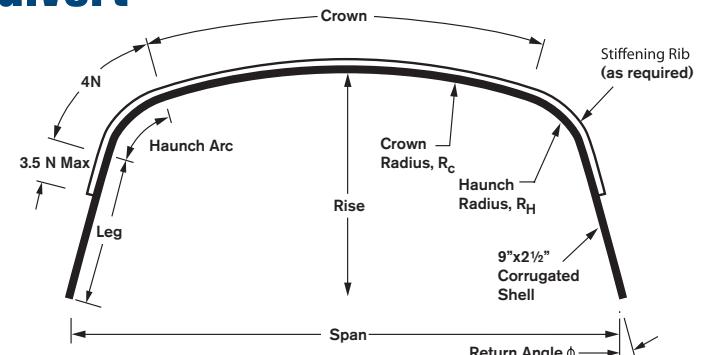

## Reinforcing Ribs

These structures are comprised of a corrugated aluminum alloy shell and reinforcing ribs connected by  $\frac{3}{4}$ " bolts to the side haunches and the crown. The height of cover tables on the following pages show the combinations of corrugated aluminum alloy shell thicknesses and reinforcing ribs to address different live load H and HS 20, H and HS 25 and HL 93. For designs with different live load conditions please contact your TrueNorth Steel® representative.

Refer to the Structure Selection examples which provide guidance on the usage the tables on the following pages.

Reinforcing rib types and spacing are shown on the following tables as Type II, Type III and Type IV. The ribs used upon the haunch and the crown may be different types. The reinforcing rib spacing is shown on the following tables "Haunch Rib Spacing or HRS and Crown Rib Spacing or CRS".

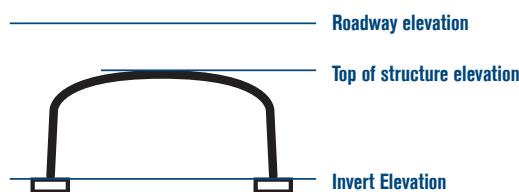

**Haunch plate gage or HG as designated on the tables** refers to the metal thickness. 2 = 0.125" thickness, 3 = 0.150", 4 = 0.175", 5 = 0.200", 6 = 0.225", 7 = 0.250.

## Height of Cover Tables Measurement

The cover height shown on the Height of Cover Tables is measured from the top of the crown plates to the bottom of flexible pavement or to the top of rigid pavement.

## Structure Selection Examples

### EXAMPLE 1

21' 3" span x 6' 10" rise structure

- 2.00' height cover from top of structure to bottom of asphalt pavement
- AASHTO HS-20 live load
- Use Table 3-5 page 32 for HS-20

**Result: Use Type 2 configuration with cover range 1.4' to 5.0'**

### EXAMPLE 2

6' 8" span x 7' 6" rise structure

- 4.00' height of cover from top of structure to bottom of asphalt pavement
- AASHTO HS-25 live load
- Use Table 3-6 page 33 for HS-25

**Result: Use Type 2B configuration with cover range 2.7' to 5.0'**

### EXAMPLE 3

25' 4" span x 9' 5" rise structure

- 1.4' height of cover from the top of structure to bottom of asphalt pavement
- AASHTO HL-93 live load
- Use Table 3-7 page 34-35 for HL-93

**Result: Use Type 3C configuration with cover range 1.4' to 5.0'**

Corrugated footing pads

Aluminum headwall

Full corrugated invert

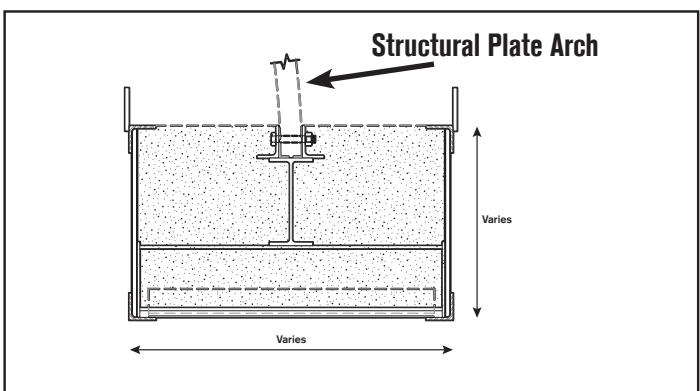

Aluminum headwall and wingwalls

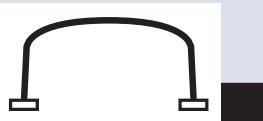

Aluminum headwall
