### 60" Aluminized T2 Perforated Retention System

#### Contractor

Weber Construction

#### Consulting Engineer

Performance Engineering

#### Application

Two perforated retention systems. Each system was 60" perforated Aluminized T2 735' in length.

#### Why this product from TrueNorth Steel?

Ease of installation, contractor was familiar with installing perforated steel retention systems.

#### Project Challenges

There was limited space for stormwater infiltration system.

#### Special/unique elements of the project

Utilized larger diameter corrugated steel pipe to store stormwater for infiltration between homes and development.
