TRUE RAIL™

Add Aesthetic Appeal to Railing Systems

TrueNorth Steel has added TrueRail™ to their portfolio of custom design solutions available for owners, architects, and engineers. TrueRail™ is a design-build solution created to give clients the ability to add aesthetic appeal to the standard picket rail and 8-line rail systems.

TrueNorth Steel®

TrueNorth Steel allows clients the control to create custom designs in steel rail panels. This does not replace existing rail solutions but offers an additional layer of customization. This new technique can be applied to most existing steel rail systems as well as new ones.

Features & Benefits

- Replace spindles with custom-designed panels
- Add fabricated logos to panels for branding
- Add accent colors to specific panels
- Update rail panels to add punch to existing railings
- More economical than 8-line rail systems
- State and local code and safety compliant
- Spec sheet provided for architects

The end user now has the option of a custom product at a competitive price compared to the run of mill rail systems. Tap into an existing library of designs, work with TrueNorth Steel on the designs, or provide your own. There are a few projects in the works already.

“ The design flexibility of this product made it an easy choice.”

– Stephen F. Pine, The Pine Companies
