Application

Bridge Replacement

Why corrugated steel pipe from TrueNorth Steel?

The spring after this box culvert was installed, there was a heavy rain that brought water levels 2" from the top of the inside of the culvert. The structure stayed in place and handled the rain event with no problem.

Project Challenges

First time using this product by the county and the gross weight of loads that would be using this crossing. Shooting grade.

Special/unique elements of the project

Used existing 2'x2' concrete stringers as footers under the box culvert to support increased weight of loads.

Other TNS products used

TrueNorth Steel assisted in the the grade to make sure it was done correctly.
