

Mandaree Oilfield Tanks | Mandree & Dunn Center, ND

Five 1,000 & One 400 BBL Oil Tanks with TrueContain™ & Catwalk Systems

TrueNorth Steel solution and products used in application:

Oilfield operator contacted TrueNorth Steel to provide a multiple product solution for a pair of projects they were building in Mandaree, ND and Dunn Center, ND. The request consisted of tanks, custom catwalk, and two separate containment areas.

The turn key solution provided to the customer for delivery and installation of our patented TrueContain™ Containment Systems resulted in multiple benefits. The customer was able to save time and focus on the additional required tasks at the location. Our experienced team installed our TrueContain™ Containment Systems in about half the time it would normally take. The Oil Storage Tanks were designed to meet the customer's detailed engineering requirements. The precise fitting locations allowed the customer to attach the pre-fabricated piping without issue. The customer was extremely happy to be ahead of the projected schedule for this portion of the project.

The catwalk system allowed the customer to reduce total installation time and provided required customization. The ease of installation and designed flexibility saved the customer valuable time in the field. The custom application was designed to accommodate a transition from a 1000BBL tank to a 400BBL tank.

TrueNorth Steel's company owned logistics organized the delivery of (6) Oil Tanks, (1) Catwalk, and (2) TrueContain™ Containment Systems over a period of multiple days. The products were delivered on time, staged at location, and arranged in the requested order to minimize downtime at the location.

The projects were completed ahead of time and exceeded the customer's expectations.
