

COMMERCIAL

LINCOLN COUNTY BRIDGE DECK REHABILITATION AND REPLACEMENT

LOCATION

Lincoln County, MT

SCOPE

Bridge Deck Rehabilitation

A TrueNorth Steel RediDek® system, quickly and successfully restored a county bridge in a remote area of northwest Montana. The old bridge deck was removed the day prior and the Redidek deck replacement was installed by the following afternoon.

A unique challenge of this project was matching the county-constructed stringer system to the prefabricated RediDek modules. Additionally, TrueNorth Steel provided custom fabricated guardrail to meet the county's unique specifications. TrueNorth Steel's full spectrum services from design to installation kept this prefabricated, yet customized product installation on budget and on schedule.
