

## CONSTRUCTION PRODUCT

### MONTANA DOT RONAN - NORTH

LOCATION	SIZE	COMPLETION DATE	SCOPE
Ronan, MT	30 Rolls/8,200 SY InterAx NX850 (12.5'x197') and Skaps GT175	2023	Tensor InterAx NX850 Non-Woven Geotextile

The Montana Department of Transportation ran into an issue with the soil they were building a bypass on through Ronan, MT. The soil was so poor that it couldn't support the weight of a human, let alone a bypass. To remedy this, TrueNorth Steel used Tensor InterAx NX850 and Non-Woven Geotextile to allow for drainage and stabilization. This was the first time the MTDOT had used this material, and it proved to be a great solution for this project.
