

STORMWATER MANAGEMENT WELLS FARGO SENTINAL APARTMENT HIGHRISE

LOCATION	SIZE	COMPLETION DATE	SCOPE
Golden Valley, MN	84" CSP	2023	Aluminized Type II Solid Wall Stormwater Detention System

TrueNorth Steel provided a stormwater management product for one of the biggest proposed developments of its kind in recent city history. The project owners had concerns about the systems capabilities to support the city's heaviest fire trucks/apparatus with outriggers. TrueNorth worked with 3rd party consulting firm to calculate what would need to be done to satisfy the cities requirements. It was determined the system would be fine if they could lower it to provide more cover to support weight loads.
