

Cameco Resources Uranium Mine

| North Butte, MT

144” Dia. Vaults with Safety Ladder and 148” Lids

Owner

Cameco Resources

Contractor

Cameco Resources

Consulting Engineer

Cameco Resources

Application

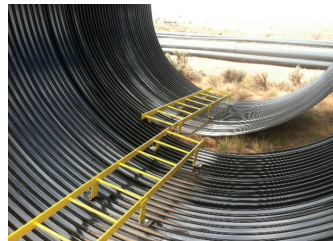

Uranium vaults. These are used as a junction where main lines meet from the header house. From that point the product is distributed into separation and drying facilities.

Why this product versus others?

Cameco came to TrueNorth Steel with a lid design and rough draft design of the ladder. TrueNorth Steel assisted them by drawing up new designs which saved them time and money. The new designs were approved and the project moved forward. TrueNorth Steel now provides this solution to URenergy, Uranerz Energy as well as Cameco Smith Ranch.

Additional TrueNorth Steel products used

Straw wattles erosion control
